TITLE OF DIPLOMA THESIS:

Output and productivity of structural enterprises

AUTHOR: Fragoulidou Anastasia

ABSTRACT

The object of the present thesis is the output of Productivity and structural enterprises. and aims at drawing useful conclusions about the Construction Companies under examination, in terms of both each Company. The Companies under examination were carefully chosen according to the following criteria are the Companies with a 7th class contractor's certificate. The 7th class is the superior, thus these are enterprises that construct the biggest public projects . Our target is the proper reading of the financial elements and their translation into consequences so that the engineer will gain knowledge of the financial reality in Greek structural companies. The main sources of information were the Annual Reports and the Synoptic Balance Sheets, which the management of each company is obliged to publish at the end of each year. There is being a presentation for each enterprise separately, there is presentation, corporate finance analysis during the 5-year period and after that, follows the analysis of their financial development by using ratios and presenting graphs that concern basic economic values.. And these indexes are annotated relatively to the time factor. Next, there is a comparison between the six companies and finally there are being introduced general conclusions about the financial state , the evolution and the prospects of the structural field in Greece. Finally became for each index the interpretation of the rise or fall, the desirable rates, the fluctuations, the causes of an undesirable evolution where it occurs, as well as amelioration suggestions.
