

## **ACADEMIC YEAR 2012 – 2013**

### **TITLE OF DIPLOMA THESIS:**

Αποδοτικότητα δομικών επιχειρήσεων

**AUTHOR:** Βασιλόγλου Αλέξανδρος

### **ABSTRACT**

The subject of this thesis is the assessment of the financial situation of the companies of the Greek construction sector through the use of financial ratios. Through the analysis conducted, it is possible to assess the development of the financial condition and the efficiency of a technical-construction company. The chapters that follow present the strengths and weaknesses of the construction sector in our country. Moreover, the financial ratios of liquidity, activity, profitability and the capital structure and viability for a specific number of technical companies are analyzed and interpreted in order to draw conclusions regarding their situation compared to the rest of the sector. Finally, the conclusions drawn from the preceding analysis are cited and some counter measures are suggested by the administration of the technical companies as well as by the government through its applied policies.

### **KEYWORDS**

ratios, productiveness, construction, balance, interpretation
